About me

I had my first exposure to programming through video games. After studying English for a couple of years, I had the opportunity to begin the System Analyst career, which I completed in 2020. I began my professional journey at an Argentinean IT company, where I worked for 5 years, being part of different kinds of projects, with a focus on Frontend development in my later roles. I find it fascinating to be able to build complex web and mobile applications using creativity and logic to find solutions to people's problems.
